

Product Guide

Table of Contents

Qoppa Software® offers a suite of products that cover every aspect of PDF processes and integrate seamlessly into document workflows.

Qoppa solutions include **Java class libraries** to incorporate PDF manipulation capabilities; **Java components** to integrate PDF viewing and annotating into applications; and two commercial applications: **PDF Automation Server™** to automate workflows and document handling, and **PDF Studio™ All In One Tool** to edit and manipulate PDF documents. We now deliver these same PDF solutions on the Android platform with apps: **qPDF Notes™** and **qPDF Viewer™**; and a PDF SDK for Android developers: **qPDF Toolkit™**.

Qoppa Software created our own PDF technology, making our solutions independent of all third party software on every Java enabled platform. We support all major platforms including Windows, Unix/Linux (Ubuntu, Suse, Fedora, AIX and others), Mac OSX and any other platform that has full support for Java™. Our products are carefully designed and developed to provide the highest level of performance and reliability and are proven to be industry leaders.

Our libraries are ready to integrate into your applets or applications without modification.

We are also open to discussions about desired modifications for a particular integration project.

PDF Studio™ 8

Powerful, easy to use PDF Editor
 for Windows, Mac and Linux

Review, Annotate PDF documents on any platform
 Create, edit and email PDF documents easily

Cost-Effective, Hundreds of Features, Runs on Mac, Windows, Linux and Unix!

PDF Studio™ is an all-in-one, easy to use PDF software that provides all PDF features needed at a fraction of the cost of Adobe® Acrobat® and other PDF editors. PDF Studio maintains full compatibility with the PDF Standard.

Highly Focused Company

Proven industry leader

Engineered proprietary PDF engine

Expansive set of PDF solutions

Fully Portable Editor

Runs on desktops, laptops and tablets under:

- Windows (8, 7, Vista, XP, Server)
- Linux (Debian, Ubuntu, Fedora ..)
- Mac OSX 10.7 (Lion), 10.6, 10.5, 10.4
- Unix (Solaris, AIX)

Available in English, Spanish, French, German and Italian

Standard Edition

- ✓ Annotate PDFs
- ✓ Create PDFs from MS Word, Text and Images
- ✓ Scan-To-PDF
- ✓ Fill & Save PDF Forms
- ✓ Secure Documents
- ✓ Merge and Split Documents
- ✓ Add Bookmarks, Watermarks, Headers, Footers
- ✓ Document Services Integration

Pro Edition

- ✓ All Features of Standard, PLUS...
- ✓ OCR for Windows, Mac OS X, Linux
- ✓ Content Editing
 - text, images, shapes
- ✓ Digitally Sign PDFs
- ✓ Batch Process Multiple PDFs
- ✓ Advanced PDF Split and Merge
- ✓ Precision Measuring Tools
- ✓ Preflight with PDF/X Profiles

Evaluation Download & User Guide available on our website.

Licensing

- ✓ Starts at \$89, \$129 for Pro
- ✓ Enterprise & OEM licenses
- ✓ Volume discounts
- ✓ Academia and non-profit pricing

PDF Automation Server™

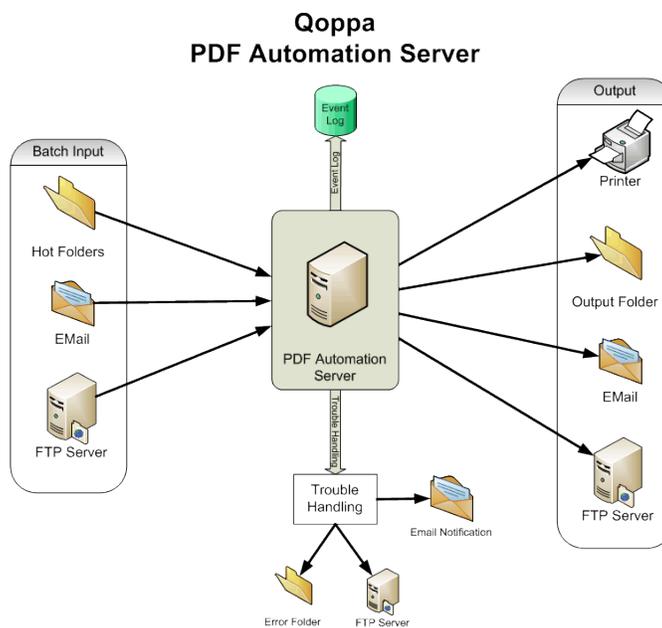

Server-side application to automate PDF workflow
on Windows, Linux, Unix and Mac

Automate the receiving, processing, and routing of PDF documents
Streamline document workflows and circulation

PDF Automation Server (PAS) is a unique product to automate the receiving, processing and routing of PDF documents. Use PAS as an essential tool to streamline your document workflows and circulation in your organization.

PAS receives PDF documents from multiple sources concurrently, including email, ftp servers and local or network folders. Processes are defined independently for each document source to perform a number of functions on the documents, including **conversion, printing, preflighting, assembly, encryption, field extraction/merge and more.**

After processing the documents, PAS routes the original and modified documents to multiple destinations, including folders, printers, email and ftp servers.

Evaluation Download and Documentation available on our website.

Quality and Performance

- Highest levels of performance
- Proven robust and reliable
- Advanced event logging
- Backed by Qoppa expert support

Easy to install and cost-effective

- Intuitive wizards to define jobs
- Up and running in a few minutes
- No third party software required
- Starting at \$2,200 per server

jPDFAssemble™

Java library to assemble PDFs

Combine, merge, and split PDF documents
Add or manipulate bookmarks
Integrate in your Java or Web applications

jPDFAssemble can work with PDF documents from files, URLs and input streams and save documents to files and output streams.

- **Split PDF documents**
 - extract, delete pages from existing documents
- **Merge PDF documents**
 - insert pages from other PDF documents into new or existing PDF documents
 - append PDF documents into existing documents
- **Create new bookmarks or edit existing bookmarks / outlines**
- **Update document meta-data information**
 - such as author, description, title...
- **Save to the local file system or to Java output streams**
 - to serve documents from J2EE application directly to client browser without any temporary files
- **100% Java** –your application remains platform independent
- **No third party software** or drivers required

jPDFEditor is a self contained Java component that can be deployed in a Java application or a web application (in a web page as an applet, or a Java webstart application) to enable users to display, annotate, save and print, edit content, and redact PDF documents. It does not require any client installation or third party programs. Your application remains in control of your documents, so you can enforce your access and security protocols.

- Display, annotate and print PDF documents and image files
- Fill and save PDF forms and get/set fields data
- Add notes, stamps and comments
- Digitally sign PDF files
- Text search, selection and markup
- Content editing tool allows users to modify content in PDF documents
- Redaction feature to permanently remove sensitive information from PDFs
- Includes jPDFProcess API to further manipulate PDF documents
- Load and save files from local system, network or web servers
- Fully compatible with PDF 1.7, the latest format
- Support for all image types, all fonts
- Available in English, French, German, Italian and Spanish

[Live Demo, Evaluation Download, Documentation, Code Samples available on our website.](#)

- Volume discounts
- OEM and Distribution licenses

jPDFFields™

Java class library – interactive PDF forms

Merge fields data into interactive forms
Extract fields data from interactive forms
Integrate into your Java or Web Applications

jPDFFields is a Java library to work with interactive PDF forms in AcroForm and XFA formats, allowing your application to get and set field values, and import and export from and to FDF, XFDF and XDP formats. jPDFFields can flatten fields in a PDF document.

- Load PF documents from files, network drives, URLs or input streams
- Work with PDF forms in both AcroForm or XFA formats
- Export fields data to FDF, XML (XFDF) or XDP files
- Import fields data from FDF, XML or XDP files
- Flatten form fields
- Reset fields to their default value
- Support for barcode fields
- Save updated PDF files as file, as OutputStream or a ServletOutputStream
- 100% Java –your application remains platform independent
- No additional drivers or software required

jPDFImages™

Java class library – convert PDF ↔ images
TIFF, JPEG, PNG

Import images into PDF pages
Extract PDF pages as images (TIFF, JPEG, PNG)
Integrate in your Java or Web applications

jPDFImages is a Java library to export images from PDF and import images into PDF. This library creates images from pages in a PDF document and exports them as JPEG, TIFF or PNG images, or returns the image of any page in a document to the host Java application as a BufferedImage for further processing or to save in different formats.

jPDFImages can also create PDFs or add pages to existing PDF documents by importing TIFF, JPEG and PNG images. After creating or modifying a document, the library can save to the local file system or to an output stream to be able to serve the document directly to a client browser when working within a J2EE server.

- Export PDF document pages as JPEG, TIFF or PNG images
- Import images into new or existing PDF documents
- Support for PDF 1.7 (latest PDF format)
- Save updated PDF files as file, as OutputStream or as Servlet OutputStream
- Support for barcodes

jPDFWriter™

Java library to generate PDFs

Create PDF files simply
Integrate in your Java or Web Applications

jPDFWriter is a Java class library to create PDF documents directly from your Java program without having to install third party drivers or software. This library emulates the standard Java classes to print and draw graphics to reduce the learning curve and reuse existing code.

- Create new PDF files using simple API
- Decide at runtime to go to a printer or to a PDF file
- Uses compression for smaller document size
- Support for PDF encryption and permissions
- Support for embedding fonts
- Support for all image types, including JBIG2 (optional module) and JPEG 2000
- 100% Java –your application remains platform independent
- No third party software or drivers required

jWordConvert™

Java library to convert .doc or .docx files to PDF

Convert and Print MS Word™ documents from Java
Integrate into your Java and Web applications and applets
Convert entire directories of Word files to PDF at once

jWordConvert™ works with Word 97-2003 or Word 2007-10 documents directly from your Java applications, without user intervention and without the need for any other software.

jWordConvert is a Java library that can read and render Word documents natively to convert to PDF, to images, or to print the documents automatically.

The library can be run in a server environment, integrated into a desktop application, or embedded in a web page as a Java applet.

- Convert Word 97-2003 and Word 2007-10 files to PDF
- Convert entire directory of files in a single operation
- Set permissions and passwords on PDF documents
- Convert pages to JPEG, TIFF or PNG images
- Print documents automatically to default or named printers
- Support for JDK 1.5.0 and above
- 100% Java –your application remains platform independent
- No third party software or drivers required

Markup PDFs, fill forms and sign on your Android phones and tablets

The only Android app with true, secure digital signatures!

Works on all Android devices 2.1 and higher

qPDF Notes is an Android PDF reader and markup tool to annotate PDF documents, fill form fields, digitally sign documents, and easily send the modified documents. qPDF Notes maintains full compatibility with the interactive PDF specifications.

PDF Viewing

- ✓ Fast, high fidelity rendering of even password protected files
- ✓ Advanced text search

Review & Markup

- ✓ Add graphical, sticky, text notes
- ✓ Add text markups (highlight, cross out, and underline)

Interactive Forms

- ✓ Fill and save interactive forms
- ✓ Efficient table view for fast filling

Advanced Interface

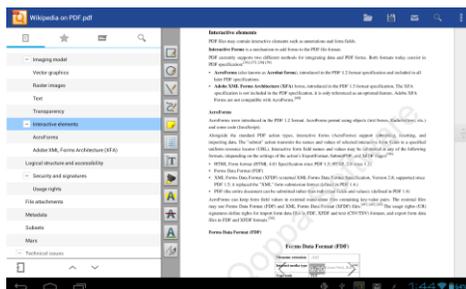

- ✓ Intuitive user-friendly interface
- ✓ Fast multi-touch pinch-to-zoom
- ✓ Customizable toolbar

Advanced Features

- ✓ Apply true digital signatures with custom appearance
- ✓ Password protected files supported
- ✓ Gmail, Google Drive, Dropbox, Box.com, and corporate email application integration

Easy Navigation

- ✓ Easy scroll - continuous page view
- ✓ Page navigation overlay
- ✓ Support for document outline and personal bookmarks
- ✓ See full list of comments

FREE: Qoppa PDF Reader

[qPDF Notes Product Page](#)

qPDF Toolkit is an Android Java SDK for app developers to quickly add PDF functionality to their Android apps.

Works on all Android devices 2.1 and higher

qPDF Toolkit provides a wide range of functions, it can be used by apps to create custom PDF documents and reports, to allow users to modify documents and to show PDF content to end users.

Following their established tradition of 100% self-sustaining, portable PDF solutions, Qoppa has developed this software completely in Android, so it can run on any Android device and can be integrated easily into any standard Android app.

Main Features

- ✓ **Render** PDF content, to implement an integrated PDF viewer
- ✓ **Convert** PDF content to Bitmap objects to export images
- ✓ **Create** new PDF documents or modify existing PDF documents
- ✓ **Add content** onto existing or new pages
- ✓ **Assemble documents**, split, merge, combine documents, remove pages
- ✓ **Encrypt** documents using RC4 or AES encryption, set document permissions
- ✓ **Set and get** interactive form field data
